Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

/note-"Nector: pBluescript SK-; Site_1: EcoRI; Site_2:
XhoI; cDNA was prepared from polyA+ enriched RNA. The cDNA
was directionally ligated into the Unizap XR vector from
Stratagene and packaged using Gigapack III Gold packaging
extracts. Plasmids containing cDNA inserts were excised
from the recombinant lambda-Zap phage using Ex-assist
helper phage and propagated in SOLR cells."

                                                                                                                                                                                                                             hydroponic conditions at UC Davis, salt stressed for 12 hours, and for 7 days, then dissected and frozen (Akhunov in J Dovark Lab). Total RNA was prepared from sheath tissue, equal quantities of RNA were pooled from the two samples, polyA was purified from the pooled RNA, a cDNA library was made, and the cDNA clones were in vivo
                                                                                                      Choi, Close, Fenton, Kianian, Otto, Simons, Zhang).

Plasmid DNA preparations and DNA sequencing were performed in the OD Andersson lab (all other authors)."

                                                    Sequence 1, Application US/07644372 Patent No. 5416009
                                            Patent No. 5416009
GENERAL INFORMATION:
APPLICANT: Lazzeri, Mario E.
APPLICANT: Nutman, Thomas B.
APPLICANT: Weiss, Niklaus
TITLE OF INVENTION: A DNA SEGMENT ENCODING A
TITLE OF INVENTION: IMMUNODIAGNOSTIC ANTIGEN
                                                                                                                                                                                                                                                                    601
                                                                                                                                                                                                                                                                                      316
                                                                                                                                                                                                                                                                                                     541
                                                                                                                                                                                                                                                                                                                         376
                                                                                                                                                                                                                                                                                                                                         481
                                                                                                                                                                                                                                                                                                                                                           436

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
